

# Parent and Child Animation

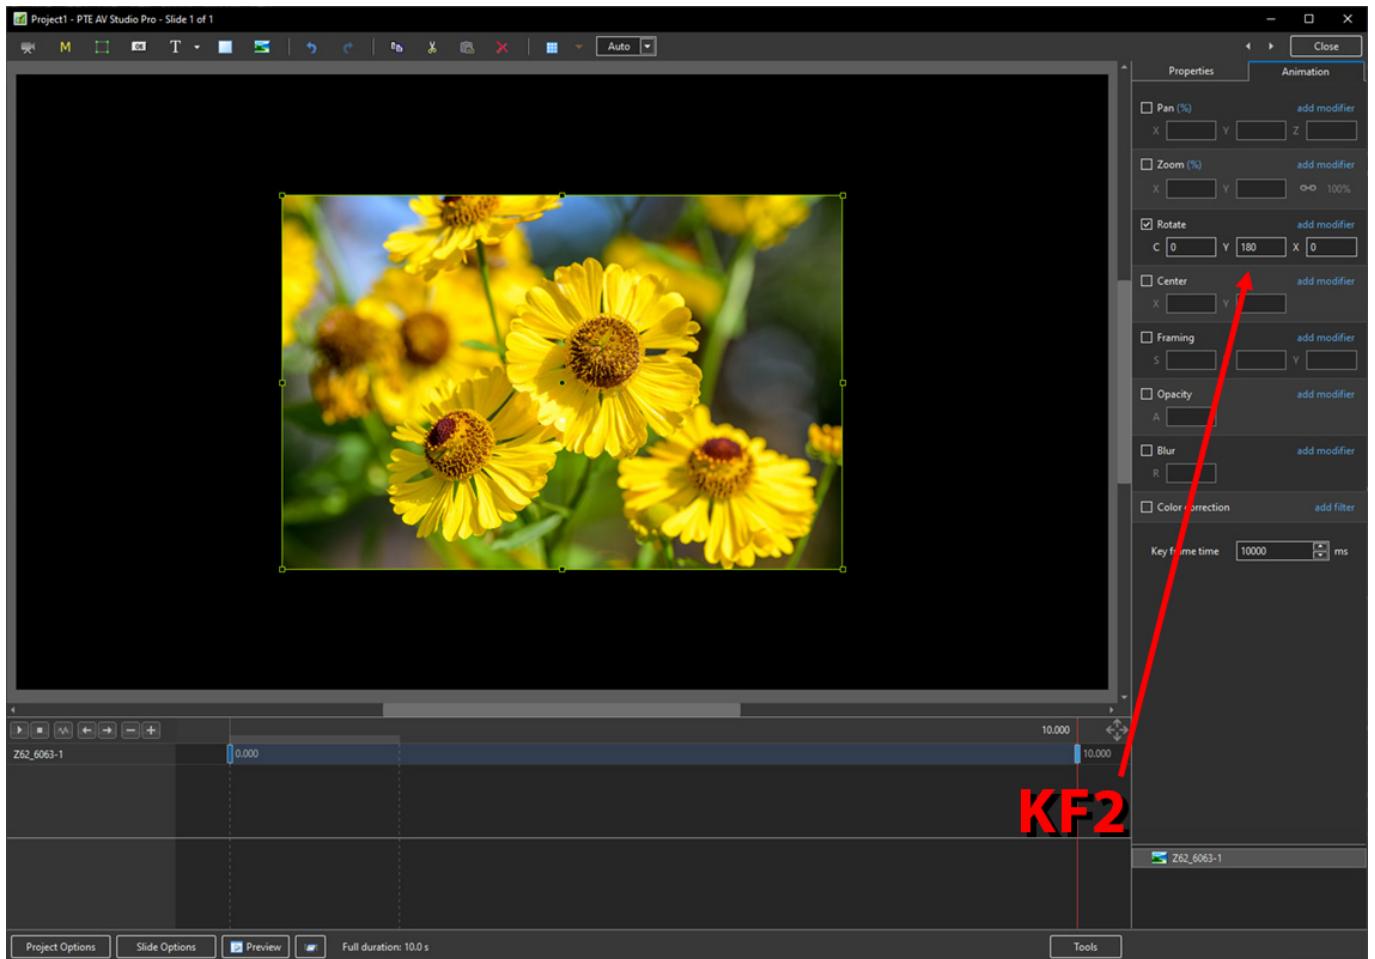

## Parent and Child Animation in Rotating Objects

- This “How To” deals with using Parent and Child relationships to rotate an Object/Image through 180 degrees and see the “Back” side of the image as a different Object/Image

### Add An Image

- Add an image to the Slide in Objects and Animation and add a Key-Frame at the end of the time line
- Click on KF2 and set Rotate to 180 degrees
- Play the animation

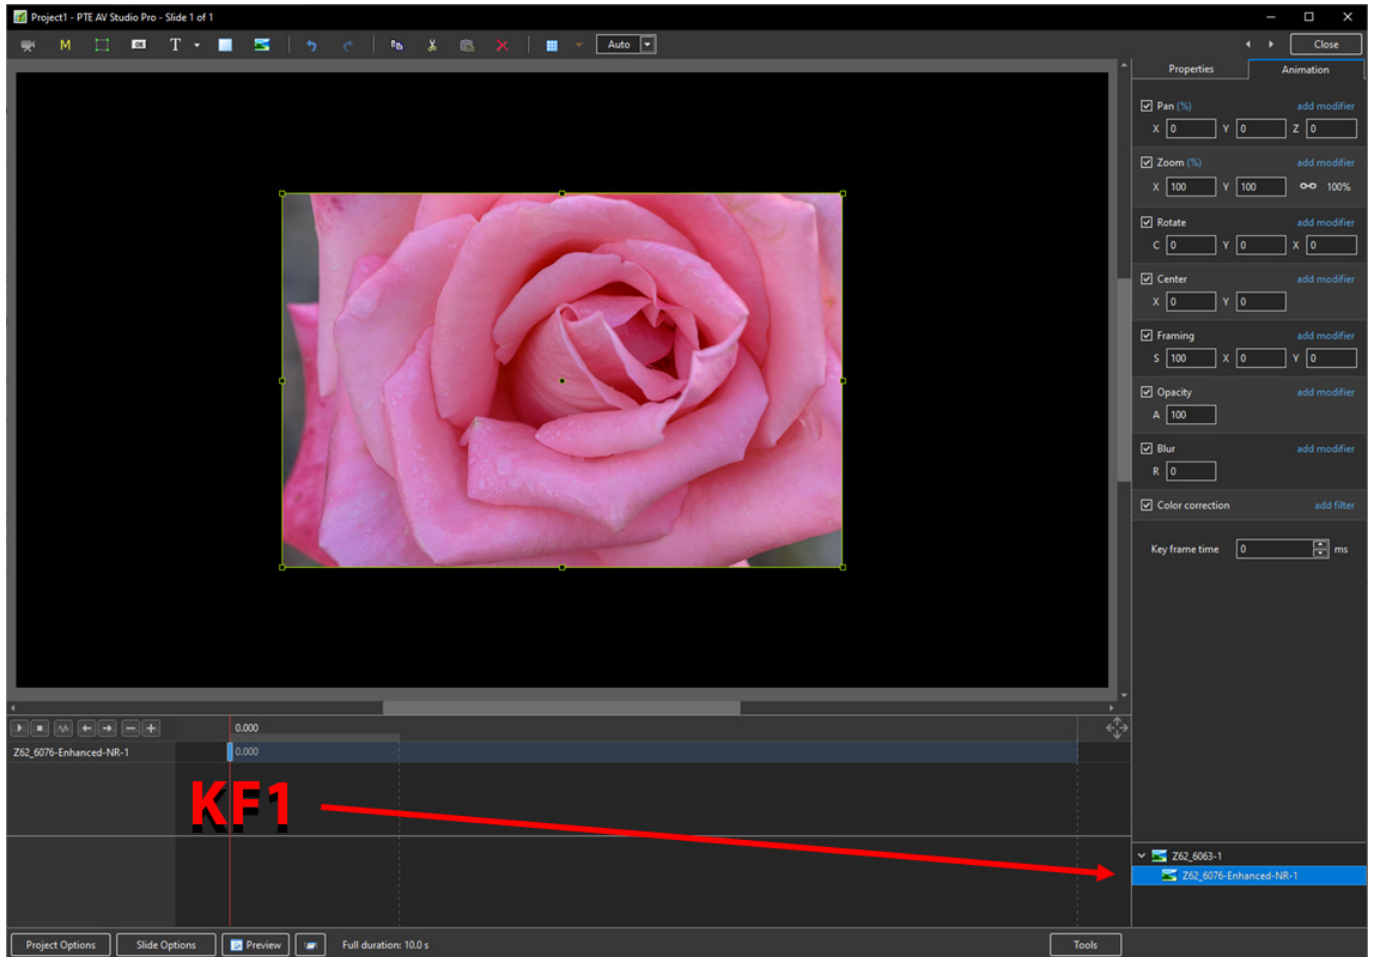

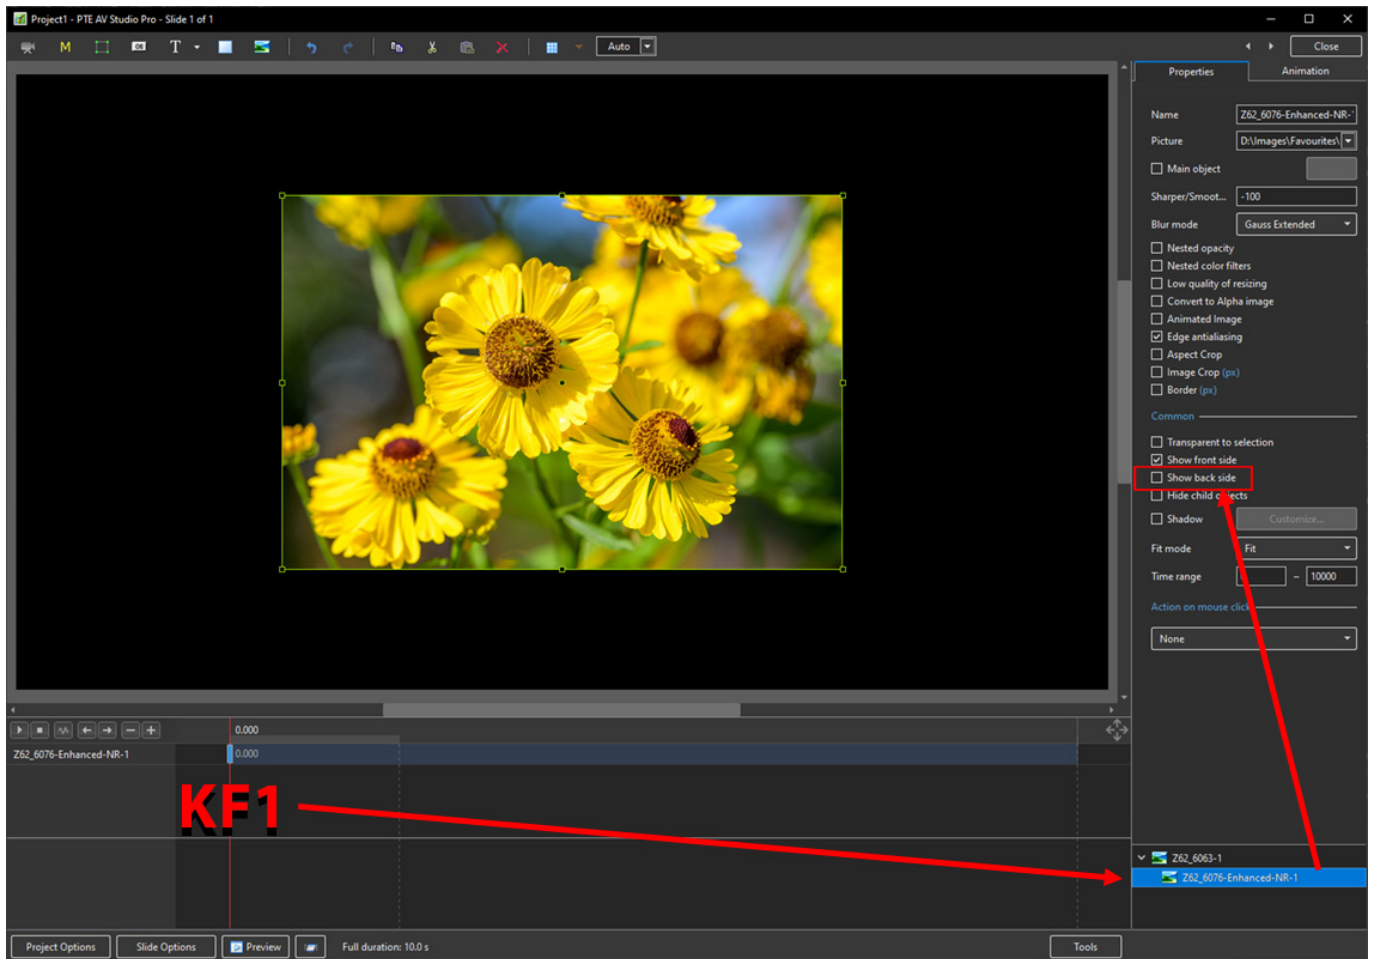

- At KF2 we now see the reversed image

## Add the new reverse image

- Return the cursor to KF1
- With the original image highlighted in the Objects Panel, add a new image
- Note that the new image is a Child of the Original Image

- Rotate the Child image by 180 degrees
- In Properties, Untick the Child Image “Show Back Side”

- Highlight the KF1 for the Original Image
- Play the Animation
- The Original Image rotates through 180 degrees revealing the Child Image behind
