# The Publish Menu

# The "Publish Show" Button

### ("Export Show")

If selected from "Settings/Preferences/Toolbars", a "Publish Show" button can be added to the Main Window toolbars. This provides further information on the "Publish" options and these are described below.

The Options are:

# HD and 4K Video

#### PTE AV Studio supports Output of UltraHD 4K video (3840 x 2160).

Creates high quality MP4 Video File (H.264)

The Project should be saved before clicking on the option - if you have not done this you will be asked

Last update: 2023/10/15 11:16 en-us:11.0:main\_menu\_1:publish https://docs.pteavstudio.com/en-us/11.0/main\_menu\_1/publish?rev=1697368568

to Save the Project.

Clicking on Custom reveals further options:

Quality Mode - Set Quality 0-150

Bit Rate Mode - Set a Bit Rate

The Video File name is the same as the Project Name and the location will default to the same as the Project location.

# **Motion Blur**

Motion Blur simulates an exposure in a video camera and fast moving objects will be blurred.

Motion Blur option is applied only to animations of PTE objects (not for video clips).

You can adjust 2 parameters:

1. Exposure (in milliseconds). We recommend 10 ms.

2. This parameters affects to a quality of Motion blur. A higher value gives better visual result. I recommend to use 20-30 frames for normal cases.

Using of Motion Blur option slow downs video encoding by 2-3 times.

All professional video editors offer Motion Blur option for video output. All professional computer graphics clips and movies use Motion Blur effect.

You can use the PTE project to test Motion Blur: https://files.wnsoft.com/test/Push.zip

Examples:

# **Hardware Acceleration**

2025/08/03 01:19

With "Hardware acceleration" option PTE AV Studio uses hardware video encoder from graphics card (NVIDIA, AMD or Intel).

Benefits: usually works faster, CPU is not used, CPU stays cool and silent.

Negative effect: visual quality worse, file size larger by 5-10%.

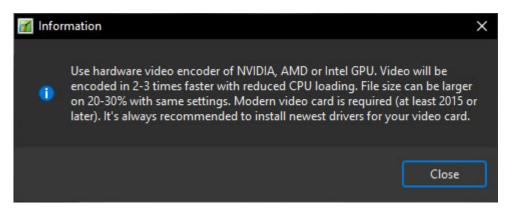

Last update: 2023/10/15 11:16	en-us:11.0:main_menu	1:publish https://docs.pteavstudio.com/en-us/11.0/main	_menu_1/publish?rev=1697368568
----------------------------------	----------------------	--	--------------------------------

Hardware acceleration gives better visual quality on NVIDIA graphics (Geforce 1030 or newer) than on AMD / Intel.

It is recommended to use Hardware acceleration for a draft (or preview). Or when you encode very long project and you want to save time. Hardware encoder is especially useful for producing 4K video to save time.

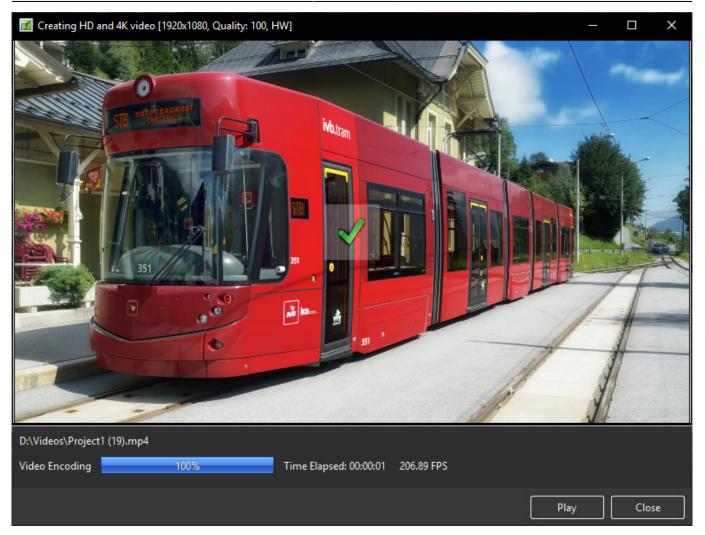

🜠 Creating HD and 4K video	×

#### Note the Information:

HW encoder is available in Macs with Apple Silicon chips (M1, M2, etc).

Click Convert to start the encoding. The Progress Window is shown below:

When the encoding is completed you can view the video on a PC. Media Player Classic - Home Cinema is recommended for PC. You can also transfer the file to a USB device and view the video with the USB Device plugged into a suitably equipped Television or Blu Ray Player connected to a Television via HDMI.

### **Video For Mobile Devices**

Creates a Video File for smartphone and tablets

## **Executable File For PC**

- Best Quality for PC in an EXE File (F9)
- Give the EXE a Name and Location and press Save.
- Double click on the Saved EXE to run.

#### Safe Executable File For PC

- EXE File in ZIP with digital signature
- Give the EXE a Name and Location and press Save.
- The result is an Application and a digitally signed ptshow file in a Zipped Folder.
- This can safely be uploaded to a sharing site etc for Download. The Zipped File can be Extracted to a Folder in Windows and the slideshow can be run from the Application File.

#### **Export Slides as Images**

Last update: 2023/10/15 11:16 en-us:11.0:main\_menu\_1:publish https://docs.pteavstudio.com/en-us/11.0/main\_menu\_1/publish?rev=1697368568

- Format choose from PNG or JPG and set quality
- Set Width and Height of output
- Choose Transparent Background (on or off) for PNG output
- Choose Folder and File Name

#### The MAC Publish Show Menu

### **Command line options**

#### Command line parameters in executable shows for Windows

You can pass some parameters for your EXE shows created in PicturesToExe.

For example,

myshow.exe -slide 5 - run slideshow from slide No. 5.

**myshow.exe -slide x** - run slideshow from slide No. x.

**myshow.exe -cover** - enlarge slide to cover all screen without black strips. For example, when screen is 16:9 and slideshow 4:3.

**myshow.exe -display x** - this parameter allows to run a show on secondary display. For example: - display 2

**myshow.exe -nomouse** - hides mouse cursor, disables mouse clicks, hides Navigation bar, disables double click. This option can be useful for a projection of EXE shows on AV competitions.

**myshow.exe -icc auto | sRGB | AdobeRGB | anyprofile.icc** - set color space for your show according your display

myshow.exe -noicc - disables loading of color profiles from JPEG and PNG images.

# **DVD-Video Disc - Video Builder**

- PTE 10 doesn't include VideoBuilder for DVD output by default.
- For compatibility and for needs of existing users we included VideoBuilder as add-on:
  - In the Main menu > Publish > click DVD-Video disc (Shift+F1) (not in the Publish button menu)
  - PTE will offer download and install VideoBuilder in one click. It will take 5..20 seconds
  - $\circ\,$  Now DVD-Video output option will appear in the Publish button menu and in the main menu > Publish

For Players connected to a Television.

Click on Publish and DVD-Video Disc.

If the currently open project has not been edited since opening then you will be taken directly to the VideoBuilder interface. If the currently open project was created in an earlier version and not edited, it is recommended that you Save As a different version before entering the VideoBuilder.

If the currently open project was edited after opening then you will be prompted to Save the Project before continuing. You cannot proceed without saving so if you want to keep the original project intact then a Save As is required.

PicturesTo	Exe Deluxe X
?	"16x9_98" Project should be saved before adding to Video Builder. Do you want to save it now?
	Save Cancel

Add one or more Projects to the Project List by dragging from its location. The current project is added by default.

		OK Cancel

- In the above example the Menu Aspect Ratio (AR) and the TV screen Aspect Ratio have both been altered from the Default 4:3 AR.
- Repeat playback of a disc is possible
- Return to menu after each title is also possible
- Chapters can be added at any desired interval.
- You can Restore Defaults whenever necessary

In the Program Tab of (Video Builder) Project Options you can set

- Idle Priority
- Location of Temporary Folder
- Click OK to exit Project Options

In the Video Builder Main Menu you can set "Create Menu".

Click on "Next".

- You can "Choose Template" from several presets and/or add your own
- Items allows you to organize multiple Project Icons into a variety of Column and Row configurations
- Hue, Saturation and Lightness allows you to change the color of the chosen Template
- Properties allows you to alter the Position, Size and Opacity of the Project Icon.
- You can also add a Drop Shadow
- Select Frame allows you to choose a frame in the video to show in the Project Icon
- You can add a Background Image to replace the Template and Customize it
- You can choose to Animate the Menu and set the duration of the menu
- You can add music to the the Menu and Customize it

Click on "Next"

Last update: 2023/10/15 11:16	en-us:11.0:main_menu_	1:publish https://docs.pteavst	udio.com/en-us/11.0/main_	_menu_1/publish?rev=	=1697368568

Include additional folders and	files to disc		
			(******)

• You can give the Project a Name

You can select any of the following options:

- Create an MPEG2 file from the Project
- Create DVD Folders which can be burned to DVD in third party software
- Create an ISO File which can be burned to DVD in third party software (or played in Media Player Classic)
- Burn a DVD Disc. Details of your burner(s) and Speed of Burn are given.
- The DVD can be given a Label
- You can Include additional folders and files to the disc
- Click Start to begin the Burn

#### Add a User-Defined Template

In VideoBuilder:

- Tick the "Create Menu" box.
- In the Next Page, "Customize" an existing Template by adding your own Background Image in the Left Hand (Edit) section.
- Click on "Choose Template" and "Add a template" Save in a suitable location with a suitable name and all of the components of the existing menu Template are saved with the renamed "bg.jpg" Background Image.
- It (the Template) then becomes a choice when you "Choose Template".
- An alternative method would be to "Add Template" first and then edit it by changing the Background etc. The Button Style is determined by the current chosen Template when the "Add

Template" is pressed.

• Buttons can be created and saved in the "New Template" folder. They must be named "Play" etc and overwrite the existing Buttons

19/19
