

Create a Simple Pan

In Objects and Animation click on (highlight) the object/image that you wish to apply Pan (or Zoom / Rotate) to.

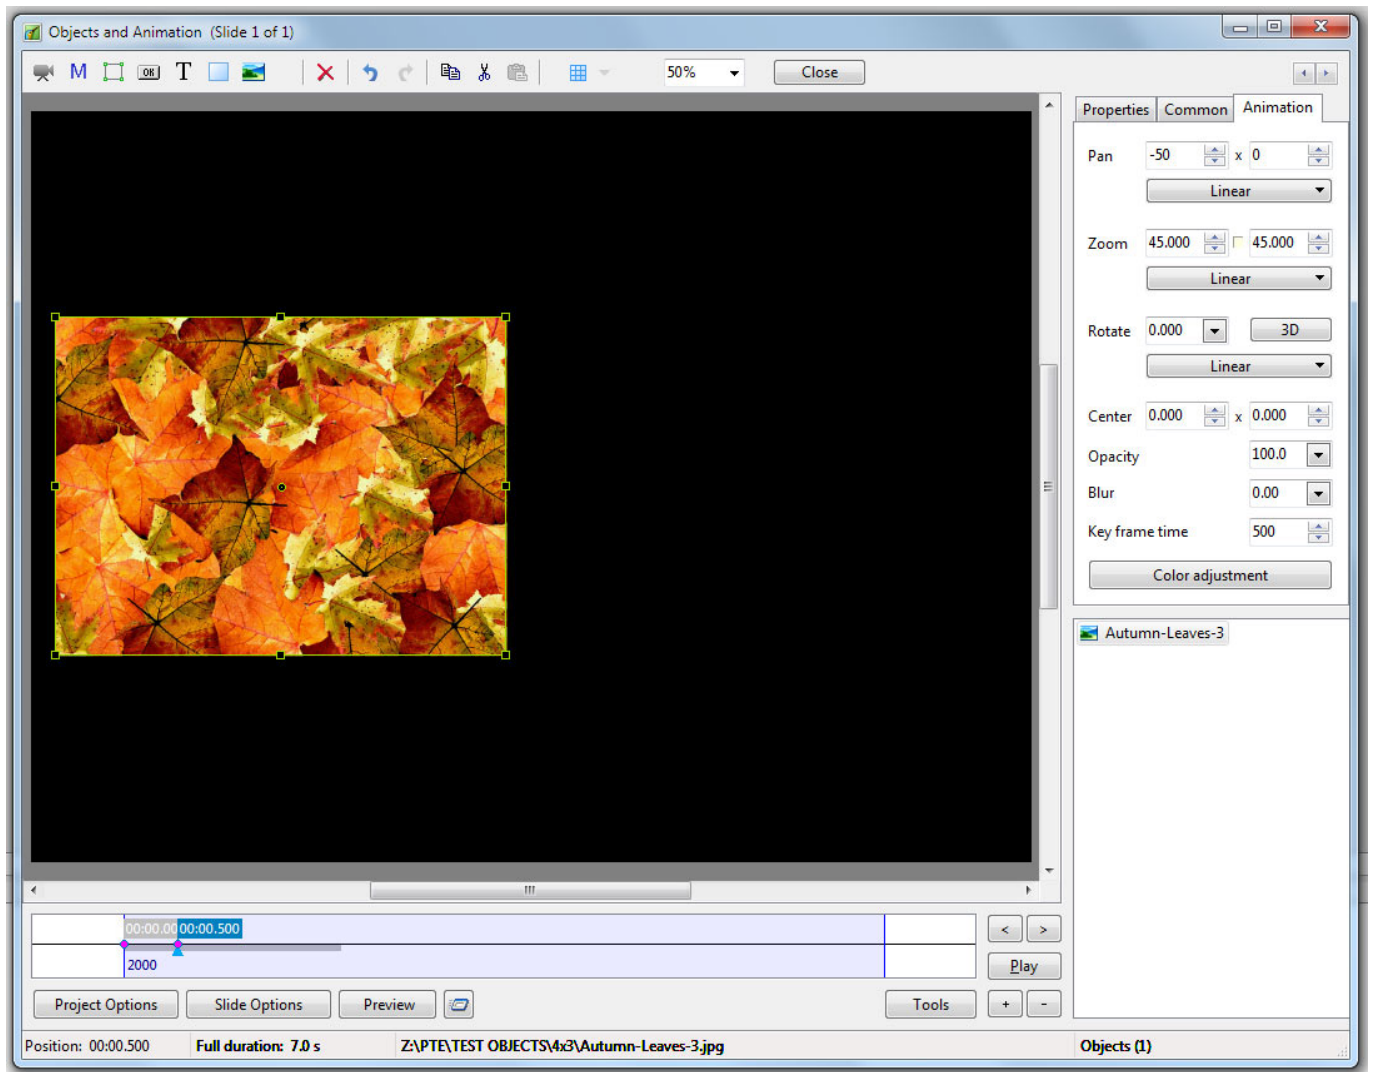

Note the Pan and Zoom parameters above: Pan = minus 50; Zoom = 45%

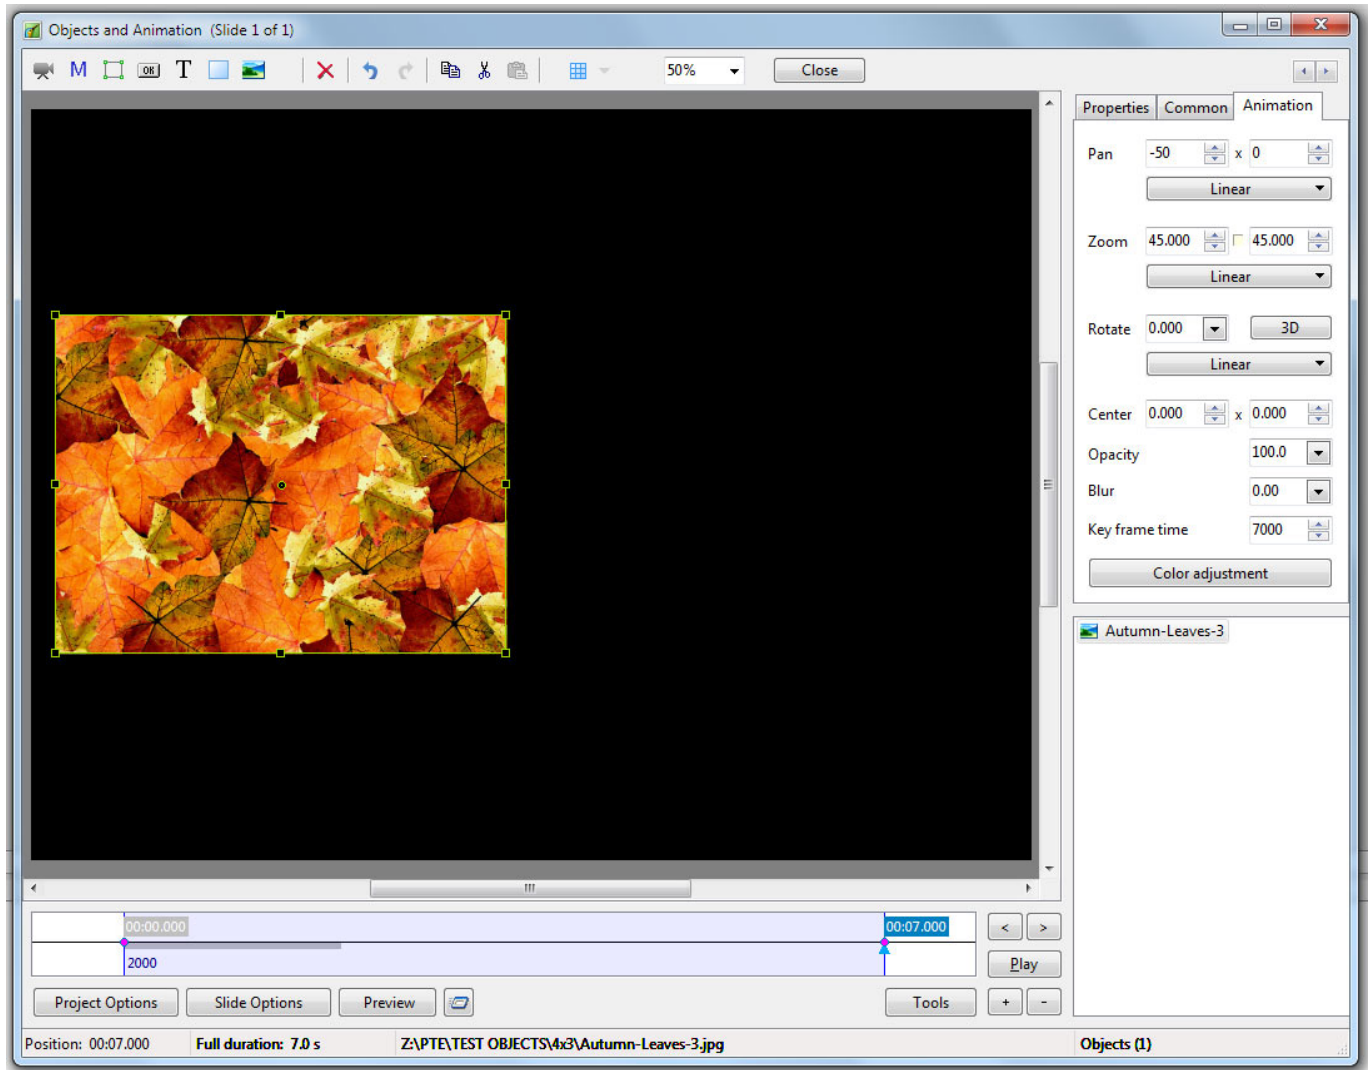

Right Click on the Key Frame on the extreme left of the timeline and choose "Clone Key Frame" from the menu.

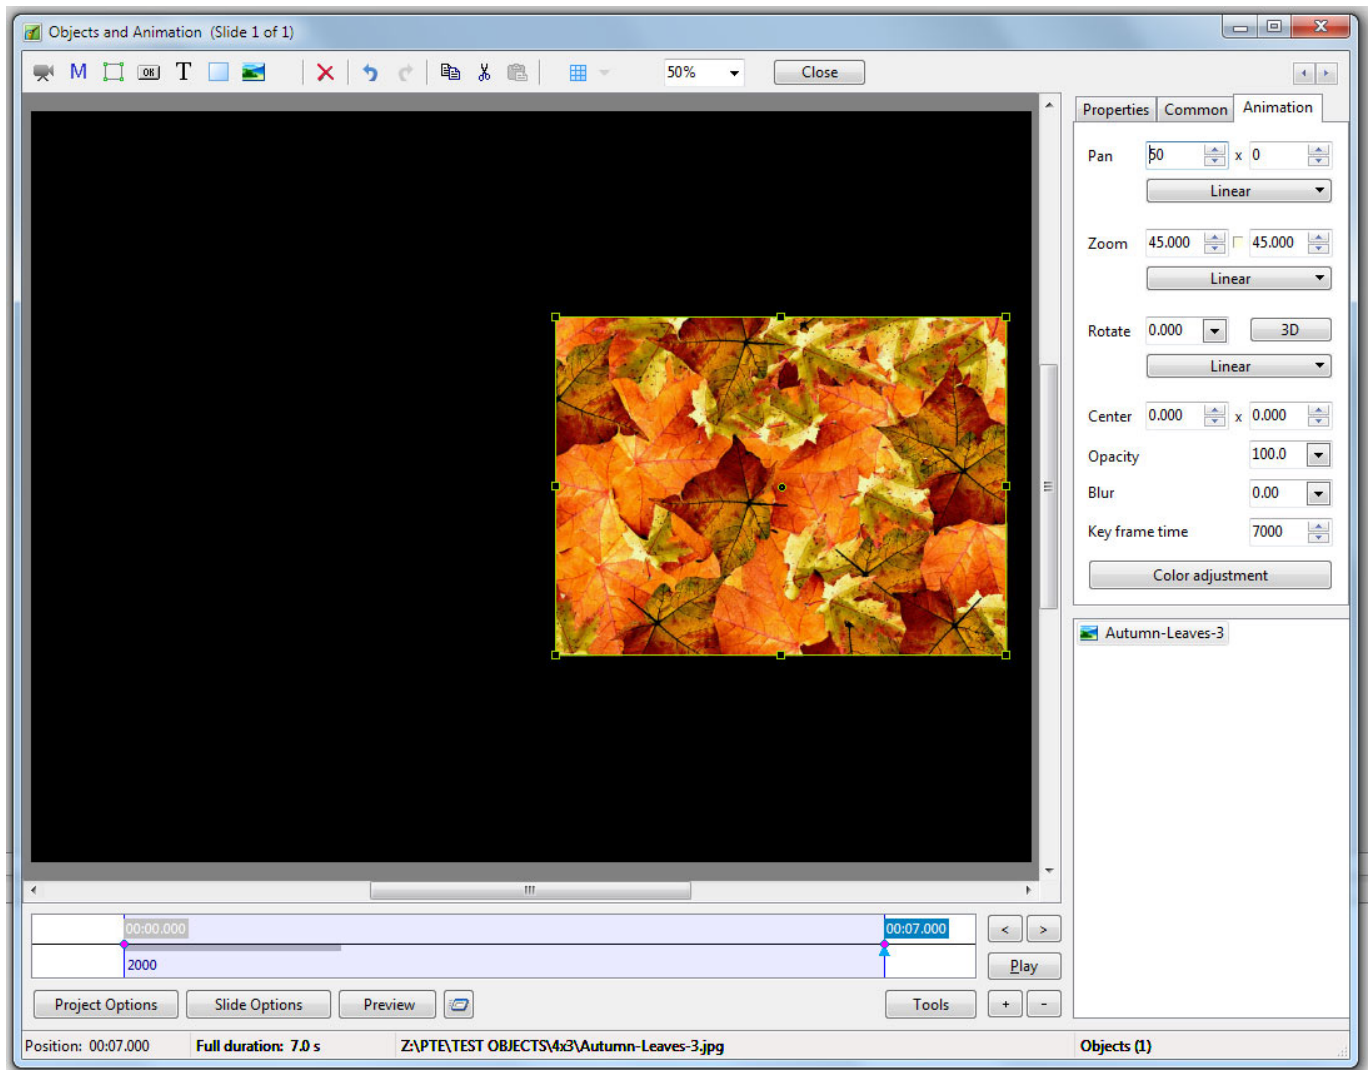

A new Key Frame is created 500ms from the original Key Frame.

Drag the new Key Frame to the right side of the timeline.

Change the Pan (horizontal) from minus 50 to plus 50.

Press Play. The Object moves from its original position (-50) to its new position (50) in 7 seconds (Key Frame Time = 7000ms). Any combination of Pan, Zoom and Rotate (PZR) can be combined in the same Key Frame. The SPEED of the animation is governed by the time between the Key Frames.
