Hardware Acceleration for User Interface

- Main window of PicturesToExe uses a hardware acceleration to show all elements of the graphical interface.
- Slide list, Timeline and File list works much faster now with smooth scrolling. Improved Video Output

Hardware acceleration for video encoding (H.264)

- It works for NVIDIA, AMD and Intel video cards. Encoding works faster in 3-5x times
- Motion Blur This option simulates a shutter effect in traditional cameras and adds a cinematographic look.
- Lossless compression option in Custom mode for MP4 H.264 video.
- 60p mode is set by default for smooth playback of animations.

Creating HD video for PC and Mac X					
Creating a video file (in H.264 format) for PC, Mac, Playstation and Xbox.					
Recommended players for playback are: Media Player Classic Homecinema, VLC and others.

Preview 10 s OK Cancel					

Improved Playback of Video Clips

- Hardware acceleration for smooth playback of video clips.
- Added support of new video codecs: HEVC and VP9.
- Direct support of H.264 video clips Video converter is not required anymore.

Audio and Improved Timeline View

- Added support of M4A audio files.
- Added two buttons "+" and "-" to change the scale in the Timeline view.

Other Improvements

- New sorting method for images in the File list:
 - $\,\circ\,$ Exif Date the original date of a photo
 - Date Date last modified
- Vastly improved quality of edge anti-aliasing for images and video clips with 3D transformations.
- Auto Updates of PicturesToExe

- New transition: Cube 3D
- Support of files from network resources
